Choosing A Safe Tree

- **ALWAYS** thoroughly inspect the tree before installing your product. **DO NOT** install your **TREE/LADDER STAND** onto any dead or unsafe tree, telephone or utility pole, structural column, or man-made structure. Doing so may result in serious injury or death.

- **ALWAYS** select the proper tree for use with your **TREE/LADDER STAND**. Select a live straight tree that fits within size limits recommended (minimum tree diameter must be no less than 9 inches and maximum of 18 inches.)**DO NOT** rely on a branch for support.

- **DO NOT** select a tree in the dark or choose a tree in close proximity to a fence. You must not have any stumps or rocks beneath your tree.

- **NEVER** use **TREE/LADDER STAND** on a tree that is dead, diseased , leaning or on wet and uneven ground as the tree may fall, break or uproot.

- Your tree must not be wet, icy or slippery or on wet, swampy, or loose ground that allows the tree to be unstable. Check the ground under **TREE/LADDER STAND** to ensure it is firm and level.

- Be sure you have a level stand platform. Your tree must not lean or have any irregular shape.

- Tree must not have any loose or scaly bark or excessive vines, nails, screws, or any other sharp objects protruding that may sever webbing on product. Any surrounding trees must not lean or have dead limbs that may fall onto you or your product.

- **NEVER HURRY!! HURRYING CAUSES ACCIDENTS!!** While climbing a **TREE/LADDER STAND**, make slow, even movements no more than ten to twelve inches at a time. Make sure you have proper contact with tree and/or **TREE/LADDER STAND** every time you move. On ladder tree stand, **ALWAYS** maintain three points of contact with each step up the ladder and **ALWAYS** lean forward as you climb.

Several treestands are equipped with a footrest, armrests and/or shooting rail. Neither the footrest, armrests nor the shooting rail have been designed to support a user's weight. Under **NO** circumstances should you place more than fifteen (15) pounds of weight on these structures. Doing so will put the user in serious risk of injury or death.

Proper Care and Maintenance:

- Inspection for defects (damage, rot, corrosion, cracks, freezing, excessive heat, etc.) before every use is required. Do not use if damage is detected or suspected.

- We recommend replacing all hardware/cables/nuts/bolts/clips on your tree stand every two (2) years or sooner if inspection finds it necessary. Use only Ol' Man Treestands approved replacement straps and parts. Use of any other straps or parts, will be viewed as a modification to the product. Any modification will void the warranties and relieve Ol' Man Treestands from all liabilities. Failure to follow these instructions may result in serious injury or death.

- **DO NOT** overtighten the hardware. **DO NOT** use a socket wrench. This can lead to structural damage and may negatively affect the performance of your stand. Failure to follow these instructions may result in serious injury or death.

- All photos are taken from the front view unless otherwise noted.

- In most cases, bolts come with two nylon washers. One washer will be placed against the bolt head the other washer will be placed against the nut.

YOU **MUST** READ AND FOLLOW **ALL** INSTRUCTIONS PRIOR TO INSTALLATION

2025

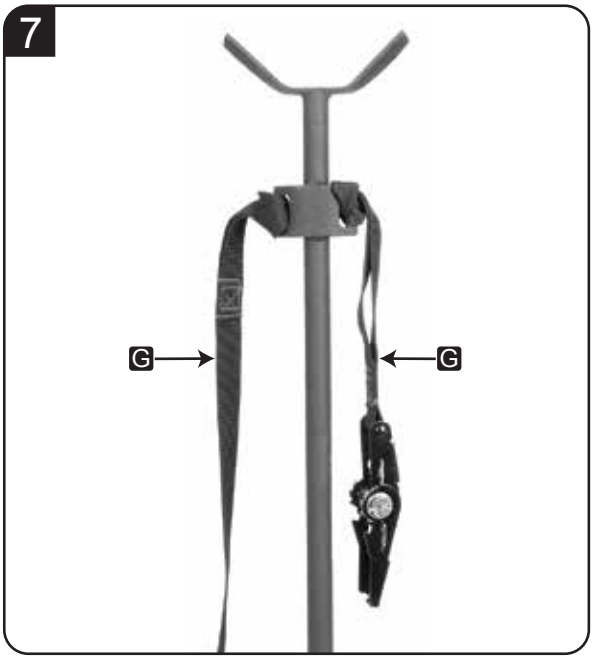
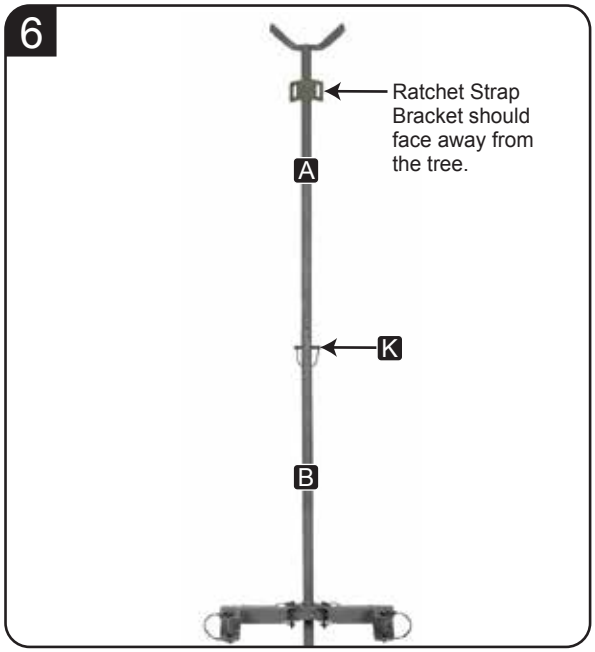
5 Fit the ***2-M8 Quickclips*** **J** onto each Left and right Ladder Support brockets **E** **F**.**NOTE:** These Quickclips will be used to secure the base of the ladder stand into place during hoisting procedures. **ALWAYS** store these Quickclips here when not in use. **NEVER** use this product without these clips.





6 Attach Top Stabilizer Bar **A** to the Middle Stabilizer Bar **B** using ***1-M6 Quickclip*** **K**. **NOTE:** The Ratchet Strap bracket should be on the outside of the stabilizer bar away from the tree.

7 Attach Ratchet Strap **G** to the right and left side of the ratchet strap bracket on the Top Stabilizer Bar. Thread the Ratchet Strap webbing loops though the slots of the ratchet strap bracket and feed the other ends of the straps though the loop to secure.
See “Ratchet Strap Instructions” (below) for correct usage.

⚠ WARNING ⚠

MAKE SURE ALL BOLTS ARE TIGHT BEFORE PROCEEDING TO INSTALLATION

Detailed Ratchet Strap Instructions

1

Open ratchet handle flat and insert end of strap through opening

2

Pull Strap through opening

3

Insert end of strap through slot in ratchet wheel

4

Ratchet handle back and forth to tighten strap

5

After strap is tight, close handle to the locked position

6

To release tension, push spring loaded retaining lock and simultaneously pull on strap

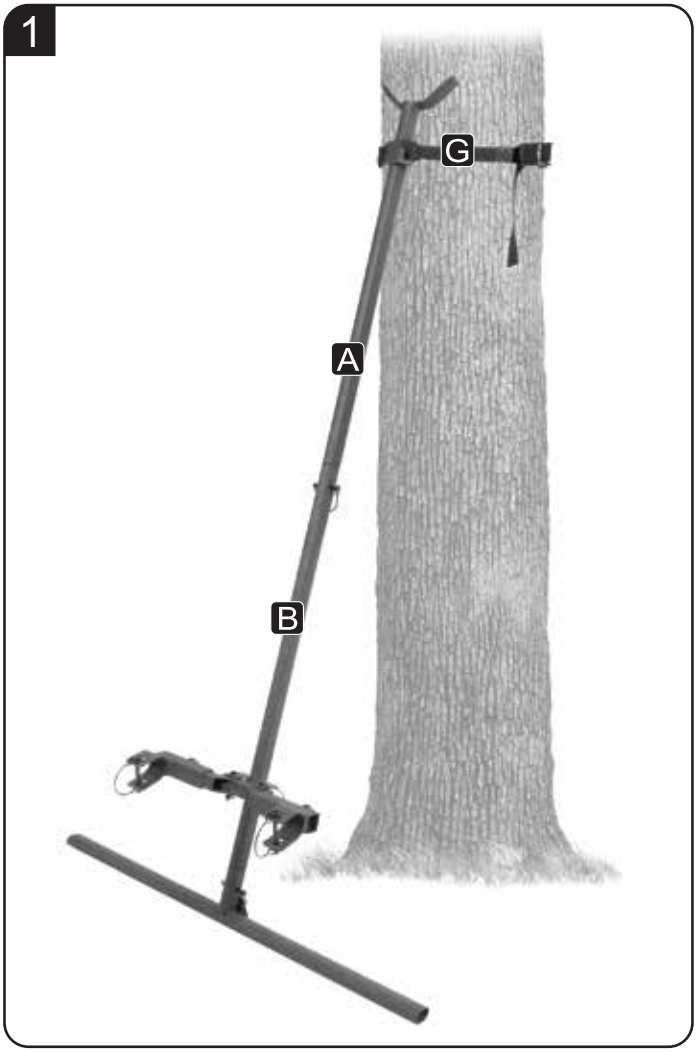
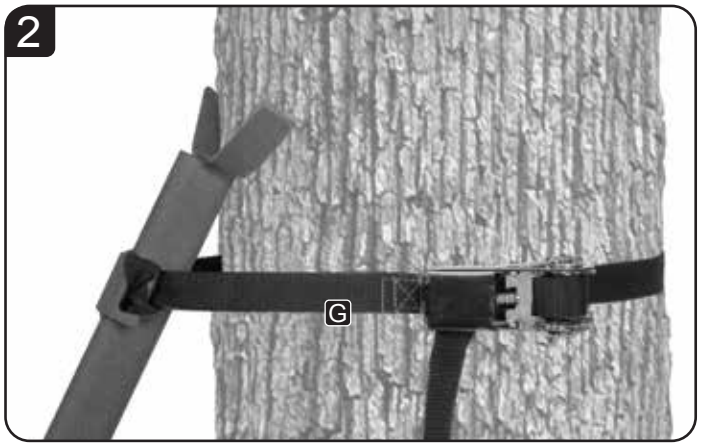
1



1 Follow your ladder stand manufacturer instructions in locating an appropriate tree. Find as level ground as possible. Lean Quick Set Stand Aid against the tree with the Ladder Support Brackets E F facing OUTWARDS away from the tree. Adjust the angle of the Quick Set Stand Aid against the tree to assure a solid connection to the ground and tree and will work best with your ladder stand.

2



2 Secure Quick Set Stand Aid to the the tree using the Ratchet Strap G. See “Ratchet Strap Instructions” for correct usage.

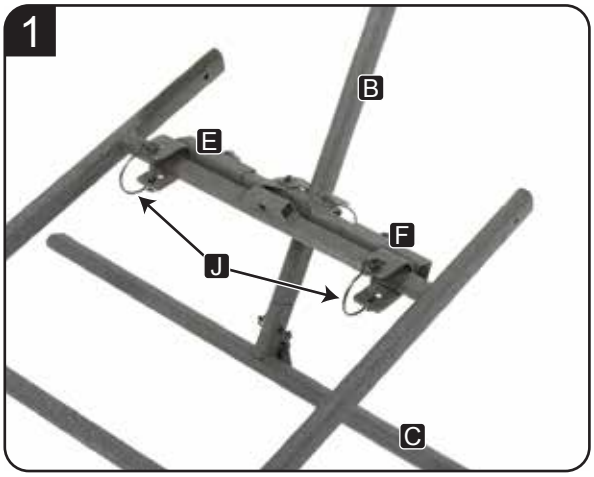
USE INSTRUCTIONS

Model: OT-110
Quick Set Stand Aid

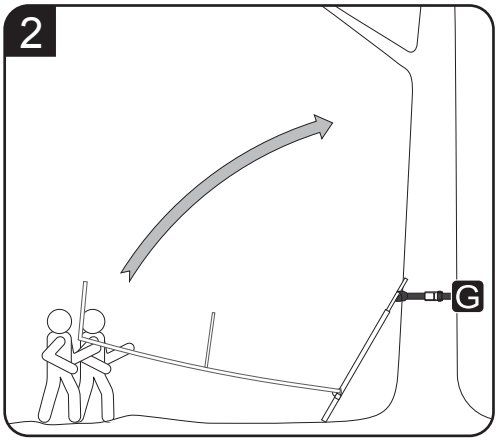
⚠ NOTE This product requires at least two (2) people for safe and correct lifting.



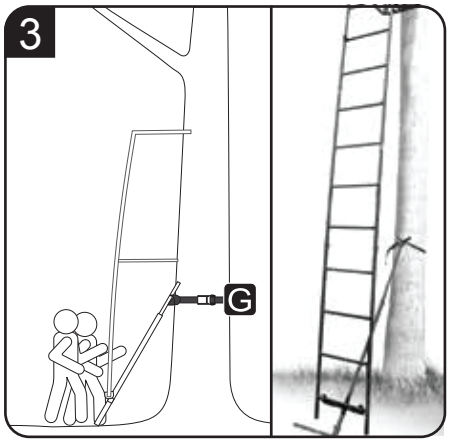
1 Lay out your ladder stand so that the bottom rungs are parrallel to the Quick Set Stand Aid base. Adjust the Left and Right Ladder Support Brackets **E** **F** to match the correct width of your ladder stand.

NOTE: To increase stability, ALWAYS extend the brackets as wide as possible.

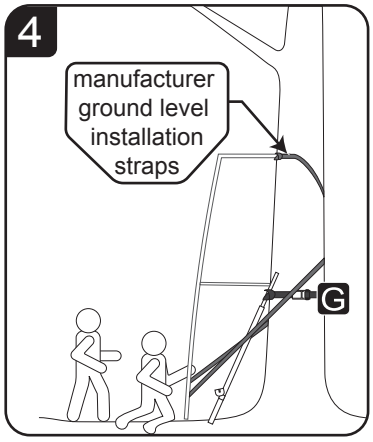
Remove each M8 Quickclip **J** from each Ladder Support Bracket **E** **F**. Then lift and place the bottom rung of your ladder stand into the Left and Right Ladder Support Brackets **E** **F**. Secure the ladder rung by re-attaching each M8 Quickclip **J** into the Ladder Support Brackets **E** **F**.



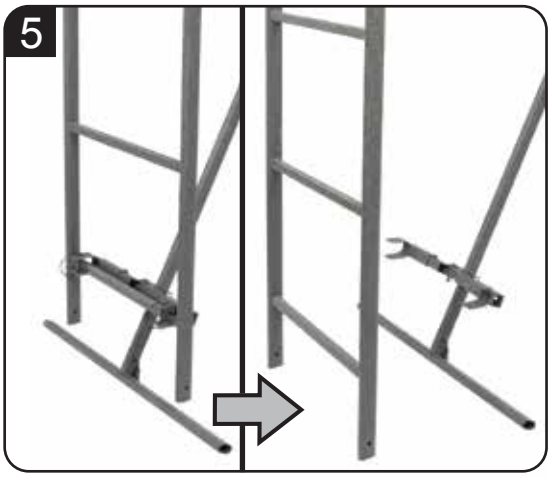
2 With one person standing on either side of the ladderstand, walk the stand upward, using rungs of the ladder until it is properly and firmly leanig against the tree.



3 Once the ladderstand has made a firm contact with the tree, check that it is securely leaning in place with both hands on the ladder rails.



4 BEFORE removing ladderstand from the Quick Set Stand Aid, it is recommended to first secure any ground level ladder securing aids (such as installation straps)



5 Once secured, remove the ladder stand base from the Stabilizer Base, then make sure your ladder stand is properly level and angled on the ground. Continue installing your ladder stand according to the manufacturer's instructions. **NOTE: Follow these instructions in reverse to remove your ladder stand from tree.**

⚠ WARNING ⚠

***NEVER** climb or use your ladder stand while it is still connected to the Quick Set Stand Aid Stabilizer. **ALWAYS** follow the correct manufacturer's ground-level safety securing instructions of for your ladder stand.*
